

Overview

uniGone is a software editor.

Our offer consists of :

- **Asn1Solutions** : a set of tools dedicated to protocols based on the ISO standard ASN.1 (Abstract Syntax Notation 1).
- **CTI Solutions** : a set of tools to enable the smooth integration of telephony into the enterprise applications.

Our recognized experience in ASN.1 based protocols, telephony integration, as well as in product development is a valuable help for customers willing to fulfill particular needs and be ready to market at the soonest.

Asn1Solutions

Asn1Solutions is based on ASN.1 notation. It is a formal language for abstractly describing messages to be exchanged among communication networks. ASN.1 is associated with several standardized binary and textual encoding rules.

For example : the Packed Encoding Rules (PER) that produce very compact encodings, XML Encoding Rules (XER) that support mappings from an XSD specification (XML Schema) to an ASN.1 specification.

This offer encompasses an ASN.1 compiler, "ready-made" standard APIs and a graphical analyzer. This offer targets Java and .NET platforms.

uniGone is a member of the French Delegation of AFNOR (French normalization organization) in ISO JTC1/SC6 and an expert member of the AFNOR ASN.1 group.

CTI Solutions

CTI Solutions is based on the **TelServer** middleware, a pure Java application, and its associated XML protocol TelServices : thanks to it, telephony services are easily available in any application. In particular, "web" solutions editors can integrate the TSWidget so that the user controls its phone directly inside the web page.

TelServer can also be used as a RCC gateway (Remote Call Control Gateway) in the Microsoft OCS environment to enable Office Communicator control their desktop phone.

The offer **CTI Solutions** also provides toolkits for developers wishing to build solutions based on **TelServer** or directly controlling the IPBX through the ECMA standard CSTA.

TelServer offers connection to JTAPI IPBX (Avaya AES or Cisco Call Manager), CSTA IPBX (Aastra NeXspan, Alcatel Omni PCX Office and Entreprise, Siemens Hipath, Ericsson...) and the open-source IPBX Asterisk.

uniGone has established a partnership with innovative CRM editors as well as with CTI and call center specialists.
